SUMMARY

Computer Science undergraduate at Queens College (CUNY), expected Jun 2028. Evening classes, so available now during working hours for a software engineering co-op or internship. Founded and launched Inkmity, a live booking app.

EXPERIENCE

Inkmity · Aug 2025 - Present
Founder & Software Developer · New York, NY

- Founded and launched an early-stage booking app for independent New York tattoo artists, live since Jul 2026: one link in an artist's Instagram bio takes the booking, waiver and card deposit. React, TypeScript, Node.js, Express, MongoDB.
- Built the first version myself from Aug 2025 to Jan 2026 (530+ commits): sign-in with Clerk, client and artist dashboards, real-time chat with Socket.IO, a booking calendar, image uploads to Cloudinary and a Stripe deposit.
- In that first version, wrote the deposit flow: the booking page calls an Express route that creates a Stripe Checkout session, and a webhook verifies the Stripe signature and marks the deposit paid in MongoDB.
- Since Jun 2026, build with Claude Code, an AI coding agent: specify each feature and fix, test the result by hand in the live app and approve every release, which caught sign-in routing, onboarding and translation bugs.
- Deploy and run it on Render and Vercel: environment variables, the live Stripe webhook, database scripts, server logs.
- Refocused the product from a marketplace to a booking tool artists link from Instagram, interviewed a New York tattoo studio, pitched 10+ shops in person, and set the pricing (flat $10 booking fee, first booking free).

Move Tact Management · Feb 2025 - Jul 2025
Software Engineer · Remote

- Automated social media reporting for a 10+ person marketing team: sole author of 19 Python scripts (108 commits) pulling TikTok, Instagram, YouTube and X post metrics from the Ensemble Data and Chartmetric APIs into Google Sheets.
- Added Slack alerts, and a Slack-to-Google Drive script that files each campaign channel's videos by creator.
- Built a MERN dashboard app (101 commits) and a creator-voting site with Stripe Checkout and an embedded Twitch stream.

Series · Nov 2024 - Feb 2025
Software Engineer Intern · Remote

- Opened 50+ pull requests on a 3-person engineering team with the CTO, working through code review in an Agile workflow.
- Built Node.js and Firebase backend endpoints and developed Twilio integrations for Vera, the company's communications bot.

Headstarter AI · Jul 2024 - Oct 2024
Software Engineering Fellow · Remote

- Built the professor search page and API route for a 3-person Rate My Professor app, de-duplicating and sorting by rating.
- Added the first Stripe Checkout route, Clerk setup and OpenAI flashcard prompt to Calmify, a team flashcard app, then built its landing page and the flashcard flip and swipe UI.

PROJECTS

Arc — Hackknight 2026, 48-hour hackathon, 3-person team · React, TypeScript, MediaPipe, Express, MongoDB

- Built the web app and API with Claude Code: in-browser pose tracking and rep counting; 44 merged PRs, 600 tests.

Amazeon — Solo App Academy capstone, an online store · Ruby on Rails, PostgreSQL, React, Redux

- Built a product catalog with search and reviews, a cart and a checkout that reduces stock on purchase (167 commits).

Bonjour World — 4-person App Academy team project · MongoDB, Express, React, Node.js

- Built Google Places address autocomplete, profile image upload, search and the attendee list across 15 merged pull requests.

EDUCATION

Queens College (CUNY) — B.S. in Computer Science · In progress: C++ programming · Expected Jun 2028

App Academy — Full-Stack Software Engineering Certificate · Dec 2023

College of Staten Island (CUNY) — Computer Science coursework (transferred) · 2020 - 2022

SKILLS

Languages: JavaScript, TypeScript, Python, HTML, CSS, Ruby, C++
Web: React, Redux, Tailwind CSS, Node.js, Express.js, REST APIs, Socket.IO, MongoDB, PostgreSQL, Ruby on Rails, Firebase
Integrations: Stripe Checkout, Stripe webhooks, Clerk, Cloudinary, Twilio, Google Places, Google Sheets, Google Drive, Slack
Cloud and tools: Claude Code, AI-assisted development, Git, GitHub, Render, Vercel, MongoDB Atlas
