

Jason Zhang

New York, NY | swejasonzhang@gmail.com | in/swejasonzhang | [github/swejasonzhang](https://github.com/swejasonzhang) | swejasonzhang.com

SKILLS

Languages *Intermediate* JavaScript (2yrs) · Ruby (2yrs) · SQL (2yrs) *Beginner* Python (1yr) · C++ (1yr)

Software React · AWS · RoR · OpenAI · Github · Postman · Firebase

EXPERIENCE

Software Engineering Intern

Nov 2024 - Current

SERIES

Remote

- Developed endpoints with Node.js and Firebase, using their scalable architectures to achieve 99.9% uptime. Took advantage of Node.js's non-blocking I/O and automatic scaling, significantly improving user-to-server reliability.
- Leveraged Twilio to increase user engagement through real-time messaging ensuring continuous user interaction.
- Collaborated in Agile teams using GitHub and Slack to track tasks and communication, increasing delivery of product.
- Implemented CI/CD pipelines using GitHub Actions, ensuring successful pull requests from CTO oversight, achieving a 95% deployment success rate.

Software Engineering Intern

July 2024 - October 2024

HEADSTARTER AI

Remote

- Improved AI prompt accuracy by 30% by enforcing specific prompt requirements within the OpenAI integration, ensuring key elements were consistently highlighted and met.
- Built a SaaS product with dynamic flashcards designed to support mental health, allowing users to save and share cards. This interactive tool significantly increased retention by providing instant stress relief and support.
- Enhanced output quality through Agile methodologies by implementing features incrementally, allowing for quicker identification of errors and speeding up error handling by 20%.
- Used Pinecone to search for similar results, enhancing user engagement and increasing user attention through more relevant and personalized content.

PROJECTS

Bonjour World | MERN Stack Project (~50hrs) | [Live](#)

- Collaborated in a team of four, utilizing CI/CD pipelines (GitHub) and Agile methodologies to streamline development and ensure code quality, accelerating delivery time and enhancing teamwork.
- Developed the front end with React/Redux, enabling dynamic updates and reducing unnecessary page refreshes, which significantly improved performance and the overall user experience.
- Utilized Node.js for the backend to efficiently handle API requests, ensuring fast and reliable performance for location-based features and real-time translation services.
- Integrated Google Maps, Places APIs, and Google Translate API for location and language features, providing real-time data and supporting language learning

ProfScore | Personal Project (~40 hrs) | [Live](#)

- Implemented a search interface for finding professors by various criteria, with sorting options for rating and popularity.
- Integrated AI-driven recommendations using vector embeddings and search through the usage of Pinecone for personalized suggestions.
- Collected and processed data through web scraping, then analyzed it with the OpenAI API, improving recommendation accuracy by 30%.
- Developed a dynamic frontend using React to minimize page refreshes and Next.js for optimized performance.

Calmify | Personal Project (~30hrs) | [Live](#)

- Implemented Material-UI to provide stylish, interactive components ensuring an engaging and functional interface for users.
- Used Firebase for secure cloud storage and data syncing, while integrating Clerk for secure user authentication.
- Developed the front end with Next.js for file-based routing and React to implement a virtual DOM, reducing re-renders and improving load times by 30%, resulting in a more responsive and efficient user interface.
- Leveraged OpenAI's GPT-4 mini to generate personalized flashcard content, enhancing user interaction.

EDUCATION

App Academy - Certification Of Completion

Graduated: Dec 2023

College of Staten Island, City University Of New York (CUNY)

Graduated: May 2022

Associate of Science in Computer Science

Relevant Coursework: Data Structures, Algorithms, Object Oriented Programming, Discrete Math
