EDUCATION

Queens College (CUNY) — B.S. in Computer Science · In progress: C++ programming · Expected Jun 2028

App Academy — Full-Stack Software Engineering Certificate · Dec 2023

College of Staten Island (CUNY) — Computer Science coursework (transferred) · 2020 - 2022

EXPERIENCE

Inkmity · Aug 2025 - Present
Founder & Software Developer · New York, NY

- Launched an early-stage booking app, live since Jul 2026, that lets independent New York tattoo artists take a booking, waiver and card deposit from one link in their Instagram bio. React, TypeScript, Node.js, Express, MongoDB.
- Built the first version myself (Aug 2025 - Jan 2026) so clients could find an artist, chat and book: Clerk sign-in, client and artist dashboards, real-time Socket.IO chat, a booking calendar, per-artist deposit policies and Cloudinary uploads.
- Made a deposit count as paid only when Stripe confirms it, not when the browser says so: wrote an Express route that creates a Stripe Checkout session and a webhook that verifies Stripe's signature before updating MongoDB.
- Since Jun 2026, direct Claude Code, an AI coding agent, on each feature and fix; caught sign-in routing, onboarding and translation bugs by hand-testing every change in the live app before approving the release.
- Run it in production on Render and Vercel: environment variables, Stripe webhook, database scripts, server logs.
- Refocused the product from a marketplace to a booking tool artists link from Instagram; interviewed a New York tattoo studio and pitched 10+ shops in person.
- Set the pricing: artists pay nothing, clients pay a flat $10 per booking with the first one free, and tips go 100% to the artist.

Move Tact Management · Feb 2025 - Jul 2025
Software Engineer · Remote

- Cut a 10+ person marketing team's daily update of 100+ artists' data from several hours by hand to minutes with Python.
- Sole author of 19 scripts pulling views, likes, comments, shares and follower counts for TikTok, Instagram, YouTube and X from the Ensemble Data and Chartmetric APIs into Google Sheets, with Slack alerts.

Series · Nov 2024 - Feb 2025
Software Engineer Intern · Remote

- Built Node.js and Firebase endpoints and Twilio SMS integrations so Vera, the company's bot, could hold a personal text conversation with each user and connect them to people with shared interests.
- Worked through code review with the CTO on a 3-person engineering team in an Agile workflow.

Headstarter AI · Jul 2024 - Oct 2024
Software Engineering Fellow · Remote

- Built the professor search page and API route for a 3-person Rate My Professor app, de-duplicating and sorting by rating; a teammate built the AI recommendation pipeline behind it.
- Added Calmify's first Stripe Checkout route, Clerk setup and OpenAI flashcard prompt, then built its flip and swipe UI.

PROJECTS

Arc — Hackknight 2026, 48-hour hackathon, 3-person team · React, TypeScript, MediaPipe, Express, MongoDB

- Shipped a live webcam range-of-motion coach (getarc.health) that counts reps for 15 movements: owned the web app and API, with in-browser MediaPipe pose tracking; teammates built the Python camera app and voice coach.
- Removed the install step for users by deciding on day 2 to move pose tracking from a Python app into the browser; specified each feature for Claude Code, tested by hand and merged every pull request on green CI.

Amazeon — Solo App Academy capstone, an online store · Ruby on Rails, PostgreSQL, React, Redux

- Built a product catalog with search and reviews, a database-backed cart and a checkout that reduces stock on purchase.

Bonjour World — 4-person App Academy team project · MongoDB, Express, React, Node.js

- Built Google Places address autocomplete, event search, profile image upload and the attendee list.

SKILLS

Languages: JavaScript, TypeScript, Python, HTML, CSS, Ruby, C++
Web: React, Redux, Node.js, Express.js, REST APIs, Socket.IO, MongoDB, PostgreSQL, Ruby on Rails, Firebase
Integrations: Stripe Checkout, Stripe webhooks, Clerk, Cloudinary, Twilio, Google Places, Google Sheets, Slack
Cloud and tools: Claude Code, AI-assisted development tools, Git, GitHub, Render, Vercel, MongoDB Atlas
